

ENGINEERED MARBLE HOW IT'S MADE

At The London Marble Company we leave nothing to chance with our Engineered Marble Products, ensuring that they are more durable than any other alternative marble furniture manufacturer, whilst at the same time keeping all the appeal and beauty of a natural marble finish.

HIGH GLOSS PROTECTION LAYER

The high gloss protection layer ensures that our marble furniture products are.

- Resistant to stains from food and wines.
- Scratch resistant, helping to protect your surface from cutlery, glass and plate scratches.
- UV light resistant, ensuring a consistent colour at all times even in strong light areas such as conservatories.
- Heat resistant, we test the surface layer for heat protection at 80 degrees.

PATTERN & PIGMENTATION LAYER

Using pattern and pigmentation technologies created for the Kitchen worktop industry, we use the latest polymers and resins to create natural marble colours and patterns that are indistinguishable from the real thing.

CRACK RESISTANT CORE

Our crack resistant core ensures that your marble furniture is resistant to cracking and high impacts. Unlikely you may think? But our experience has shown that alternative manufacturers who do not employ a crack resistant core and cast the table top in one single piece often experience critical failures within the table top.

These can be caused by invisible and internal cracks that develop within the marble top due to impacts received during transportation and installation. Often these cracks can only be detected under X-Ray scanning, and then only reveal themselves when the table is outside of its warranty.

Our crack resistant core ensures that this problem doesn't happen, leaving you to enjoy your marble furniture product, hassle free for many years to come.

ENGINEERED MARBLE HOW IT'S MADE

At The London Marble Company our attention to the weight and fixing systems used within your marble dining table ensures that you'll have a product that is stable and easier to move in the years to come.

RIGID FIXING SYSTEM

Many alternative marble furniture product manufacturers do not directly fix the marble top to the base, instead they rely on the fact that the weight of the top will hold it securely in place.

At Thomas Brown Furnishings and The London Marble Company our marble table tops are fixed directly to the base via a fixing plate and by four secure rigid fixings (Which can undone by the customer). This means that the top is securely fixed to the base.

This prohibits any slight movement between the table top and the base, thus preventing the development of cracks and stops "tip over" which can sometimes happen with alternative tables. "Tip over" can occur when a person stands on one end of the table (For instance to change a light bulb) and a sea-saw effect happens, tipping the table top from it's base, causing personal injury and product damage.

DURABLE WEIGHT SAVING BASE

Our attention to detail even applies to our base designs, with weight saving a major priority. Our best selling Tenore and Mocha marble collections have a classic "V" shaped base design to ensure maximum style for minimum weight.

Weight is an important consideration with regards to the selection of your marble furniture. Although all of our marble dining tables and sets are fully installed by our expert delivery team, there may be a point in the future at which you wish to change your room layout or indeed move house.

At Thomas Brown Furnishings and The London Marble Company we take this issue seriously, that's why we reduce our product weights by effective and practical design techniques, meaning that your table can be moved in the future in a two person operation, simple and easy!
